

# "Turbo Charge" filmed in Wasatch County

by Beverly Conley

Filming for a movie entitled, "Turbo Charge" has been on location here in Wasatch County for the last three weeks. Utah has been the base for shooting and currently sequences are being filmed in Park City.

The movie involves car chase scenes between an Austin Martin and a sawed-off Corvair. The Heber City Airport provided a backdrop for some of the high speed action.

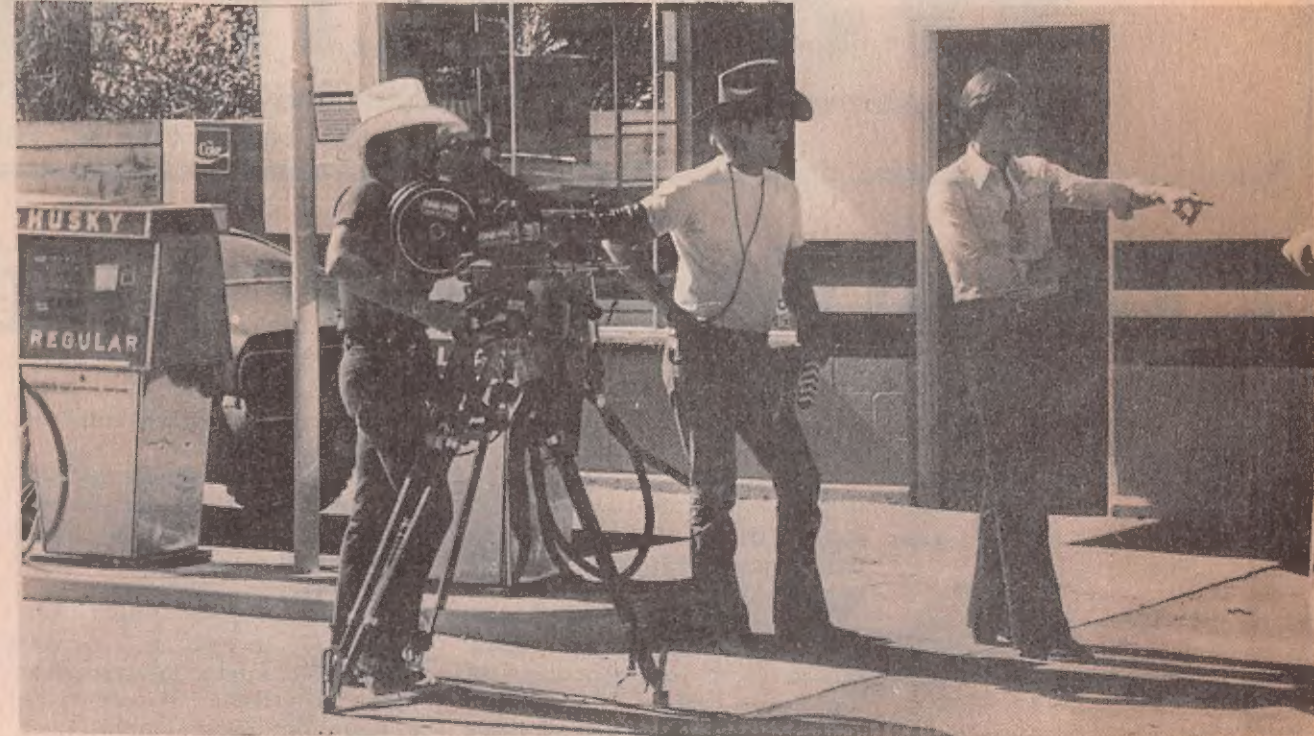

Richard Losee of Provo, and Mel

Gish, are executive producers of the production that stars Richard Losee and Rodger Clark. Some of

the scenes also were shot at the Pioneer Village.

The "Turbo Charge" which is being filmed locally features this Austin-Martin super car.

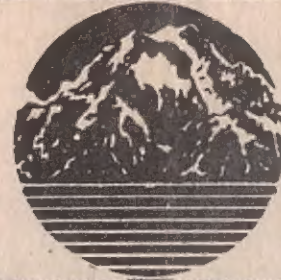

Actor and director Richard Losee giving instructions to the cameraman for the next scene of "Turbo Charge".

## CUP officials say Jordanelle site the best one

Central Utah Project officials said last week that as far as they are concerned the proposed Jordanelle Reservoir site is a good one and the dam and reservoir will be built there.

"My boss told me to say this is the spot for the Jordanelle," said Reed Olsen. "We are proceeding with plans to build it here."

Olsen, along with R.N. Jiacoletti, chairman of the Jordanelle Policy Advisory Committee, led a group of people on a tour of alternate sites for the Jordanelle

to and those supporting the present site.

Olsen's boss, is Kirt Carpenter, the director of the Central Utah Project. Olsen said all CUP plans are moving forward with the 1985 date in mind.

Five alternate sites were looked at by state, federal and county officials and representatives of Park City mines.

But, after explaining all those sites, the costs involved and the amount of water each would produce, Olsen said none of those

proposed dam. "We will build the Jordanelle."

The CUP is now doing geological studies of the reservoir and dam area but Olsen said those studies deal only with the design of the dam and reservoir.

"These are design studies and studies to see how the reservoir would affect mining interests near here," said Olsen. "We are trying to figure out how to build it."

When asked about two known faults in the area, Olsen and the projects chief geologist, Dennis

want a dam that will end up in downtown Provo," said Edwards. "How can two faults and an underground river not affect a major dam?"

Others representing private and mining interests said that the sites were poor and would end up creating a disaster for those who live near it.

But, Reed and Williams said they had already drilled 24 geological test holes and those holes prompted them to be

The independent study being sponsored by the committee is scheduled to start sometime in November and that study will focus on the safety and geology of the proposed site.

Geologists representing the Park City mines, said the economics of their mines was still being left in second place by the CUP.

They said they would press for more study into the affects of the Jordanelle on the mines.

Diamond Bar on the drainage) 1980 cost, 436 million dollars. This site was first considered as an alternate to Deer Creek in 1924. South Flank fault is believed to cross this site. W & R Service has no knowledge at this time of whether the site was ever drilled. A geologist report was probably prepared.

4. Bates site (further stream). This site was an alternate to Deer Creek. A total of 15 holes have been drilled at the site to date. Five of them in recent
